

Alteryx Designer Admin/Non-Admin Install Guide

Alteryx Analytics 9.0 and above includes both Admin and Non-Admin installation options.

Admin Version

An Admin Version installation:

- applies to all users on a machine
- installs in the system Program Files directory
 - C:\Program Files\Alteryx
- includes Scheduler, which requires a Scheduler license.

Admin installations are recommended when IT distributes Alteryx.

Note: An Admin installation will remove a previously installed Admin version during installation.

Non-Admin Version

A Non-Admin Version installation:

- only applies to the user who installed Alteryx
- installs into the User App Data space
 - C:\Users*user name*\App Data\Local\Alteryx
- does not support Microsoft DFS installations

Non-Admin installations do not require administrative privileges, making it ideal for users:

- evaluating Alteryx
- in a restricted environment who do not have administrator privileges
- who want to run side-by-side installations of different Alteryx versions

Note: A Non-Admin installation will remove a previously installed Non-Admin version.
